PRODUCT AND PROCESS INFORMATION

Certification Process

Vendors receive unique sets of randomly generated member-level test data, or “test decks,” which they process for each measure their HEDIS software calculates. The vendors’ results are compared to the expected results to determine if the software computed HEDIS correctly for numerators, denominators, and exclusions. If not, the vendors can correct the code, get a new deck, and repeat the process.

Product Overview

IMI Health produces QINet, a HEDIS reporting product. QINet processes data through client/server environments to produce HEDIS rates. QINet calculates all of the measures included in NCQA’s HEDIS Software CertificationSM program. The product provides data for all populations (commercial, Medicare and Medicaid).

Process

IMI Health clients map their data to a standard file layout. There are 6 files for which IMI Health provides a layout. After loading the data and doing quality checks, QINet is run and the output files produced.

File Layout Information

For QINet to accurately report HEDIS[®] measures, certain key fields in the file layouts must be fully populated. See Appendix A – Data Requirements (from the Implementation Guide).
