

Study Manager

- Subscription-based, "no surprises" pricing
- HIPAA compliant
- Advanced Technology
- Data Extraction
- Zero Technology involvement
- Includes CFR 21/Part 11 compliance
- Advanced Security Features
- Patient, Provider and Study Sponsored-level architecture

The Outcome Enterprise™ Study Manager is a web-based software platform that helps device and drug companies easily implement clinical outcome measurement projects including:

Health Economics

Make value-based arguments to ensure reimbursement and inclusion on approved vendor lists

Clinical Studies

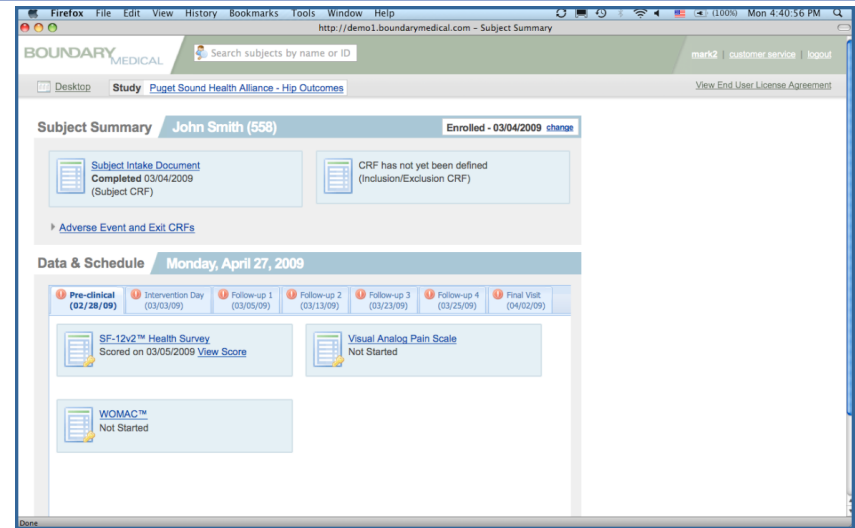

Conduct affordable, scalable surveillance projects to understand competitive landscape and off-label opportunities

Post Market Studies

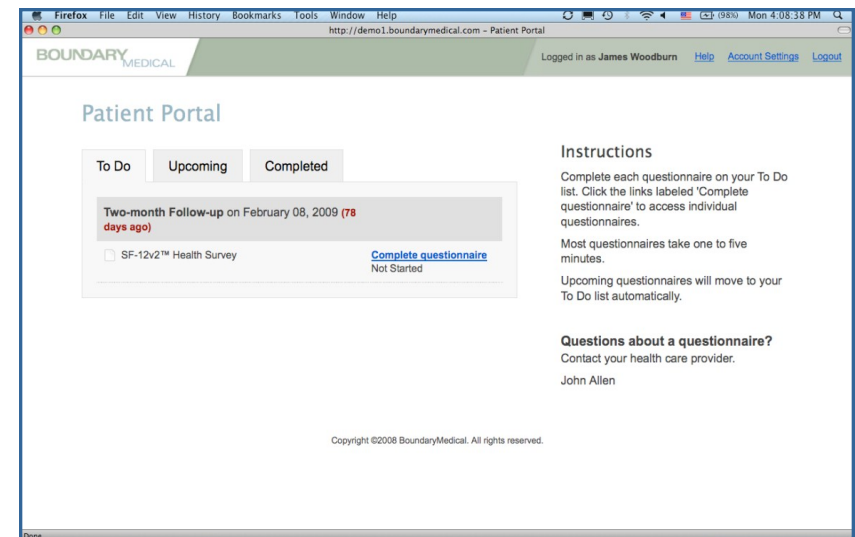

Affordably capture market-based information to promote the comparative effectiveness and value of products

What makes us unique?

The flexibility of Outcome Enterprise™ is due to its intuitive design and to the product's data library that allows user-configurable Case Report Forms (CRF) and Electronic Data Capture (EDC) design and implementation of single or multi-site outcome measurement including managing, tracking and reporting. The affordability of Outcome Enterprise™ comes from the fact that it was developed as a subscription-based software produce that you can effectively "rent" under a no-surprises pricing approach.

EXAMPLE: Clinic View (patient case binder shown) presents patient identified data in real-time as the system captures data and calculates information such as validated general health and functional survey instruments. Clinic-level reports are also available to track and manage study operations.

EXAMPLE: Patient View can be configured by the Study Sponsor and deployed by the individual study sites based on their unique workflow. Study Sites receive real-time identified information to review and/or download. Study Sites can also use a Provider Portal to give access to busy physicians interested in quickly viewing study progress.
